## How to do a hard reset on iphone 11 plus

Apple's newest range of smartphones, the iPhone 11, iPhone 11 Pro and iPhone Pro Max, share the same overall design of last year's iPhone XR, XS, and XS Max. As such, the physical buttons have inherited the same range of functions, including powering on and off, forcing a restart, entering DFU mode, entering recovery mode, activating Emergency SOS, and temporarily disabling Face ID. Subscribe to the MacRumors YouTube channel for more videos. In this article, you'll find step-by-step guides for performing the button combinations of all of the above functions, along with explanations of what the more obscure ones do and why they might one day come in useful. iPhone 11 Button Basics Apple changed many of the physical button functions on its smartphones with the launch of the iPhone 8 and iPhone X, so if you're upgrading from a device that pre-dates these 2017 models, you'll want to familiarize yourself with them. Face the screen of your new iPhone and you'll see that there are two volume buttons on the left-hand side, and a single Side button on the right-hand side. With no Home button to speak of, these three side buttons work in combination to undertake all of the necessary functions. How to Power on iPhone 11, iPhone 11 Pro, and iPhone 11 Pro Max To turn on your new iPhone, press the Side button once. If the Apple logo doesn't appear on the screen, the device may need charging - plug it into a power outlet using the supplied Lightning cable, and let it charge for at least a few minutes before trying again. If after charging your iPhone still doesn't respond to a press of the Side button, try the button combination for exiting DFU mode. If that doesn't work, you may need to take it back to Apple to check that the handset isn't faulty. How to Power off iPhone 11, iPhone 11 Pro, and iPhone 11 Pro Max Press and hold the Side button along with the Volume Up or Volume Down button until two sliding buttons appear on the screen. Release the physical buttons and swipe right on the slide to power off button at the top of the screen. How to Activate Emergency SOS on iPhone 11, iPhone 11 Pro, and iPhone 11 Pro Max Activating Emergency SOS on your iPhone automatically calls emergency services and sends a text message with your location information to the people in your emergency contacts. For this reason, you should only use it when you're in danger or facing a genuine emergency. Note that you'll need to enter your iPhone's passcode to reenable Face ID and unlock your iPhone after performing Emergency SOS. Press and hold the Side button as well as either one of the Volume buttons, so that you're essentially squeezing either side of the device. Keep squeezing until the Emergency SOS countdown initiates on the screen. You can either wait for the countdown to finish or slide it across to call the emergency services immediately and alert your emergency contacts. If you don't want Emergency SOS to automatically call emergency services when the Side button is pressed, make sure to disable Auto Call via Settings -> Emergency SOS -> Disable Auto Call. How to Disable Face ID on iPhone 11, iPhone 11 Pro, and iPhone 11 Pro Max Disabling Face ID on your iPhone makes it so your passcode has to be entered to unlock it. By disabling facial authentication, a police officer or malicious person can't unlock your iPhone simply by holding it in front of your face. Press and hold the Side button. Press and hold either Volume button. Tap the Cancel button that appears at the bottom of the screen. Troubleshooting Functions Apple changed the process of activating the following troubleshooting functions with the launch of the iPhone 8 and iPhone X, so if you upgraded from a device that pre-dates these 2017 models, it's a good idea to familiarize yourself with them in case you run into problems. How to Hard Reset the iPhone 11, iPhone 11 Pro, and iPhone 11 Pro Max Quickly press and release the Volume Up button. Quickly press and release the Volume Down button. Press and hold the Side button until the Apple logo appears, then release the Side button. During this process, you will see a slider to power off the iPhone. You're going to want to ignore it and continue holding down the Side button until the screen goes black. At that point, the Apple logo will pop up, and after the restart is complete, the screen will activate once again. Using the force restart process prevents you from having to shut the iPhone down entirely, which takes several more steps. If you do want to shut the iPhone down, you can do so by going to the General section of the Settings app, scrolling down to the bottom, and choosing the Shut Down option. How to Enter Recovery Mode on iPhone 11, iPhone 11 Pro, and iPhone 11 Pro Max Entering recovery mode can help if you're having trouble updating or restoring your iPhone over the air. For example, if the screen shows the Apple logo for several minutes but no progress bar appears, you can try putting the device in recovery mode and restoring it with iTunes. Here's how it works. Using the Lightning cable that came with your iPhone, connect the device to a computer that has the latest version of iTunes installed. Launch iTunes on your Mac or PC. With the iPhone connected, force restart it with the following steps, but don't release the buttons when you see the Apple logo. Instead, wait until the recovery mode screen appears. Press and quickly release the Volume Up button. Press and quickly release the Volume Down button. Press and hold the Side button until you see the recovery mode screen with the "Connect to iTunes" screen, then release it. Select your device in iTunes. You should see a message in iTunes saying that your iPhone is in Recovery Mode. You'll then be given options to update or restore your iPhone's software. How to Exit Recovery Mode on iPhone 11, iPhone 11 Pro, and iPhone 11 Pro Max Simply press and hold the Side button until the "Connect to iTunes" screen disappears, and your iPhone should reboot back into iOS. How to Enter DFU Mode on iPhone 11, iPhone 11 Pro, and iPhone 11 Pro Max The forced restart procedure described above can help if an iPhone is freezing, throwing up errors, or has stopped responding completely. DFU mode (standing for Device Firmware Update) on the other hand restores an iPhone if a restart or entering standard Recovery Mode doesn't solve the problem you're experiencing. DFU mode lets the device interface with iTunes, update the firmware, and restore the OS without automatically installing the last downloaded version. It's useful for installing older versions of iOS if a beta persistently hangs your phone, or if a jailbreak goes bad. Before following the steps below, make sure you have the latest version of iTunes installed on your computer. Turn on your iPhone if it isn't already. Connect it to your computer using a Lightning to USB cable. Launch iTunes on your computer, and check that your iPhone appears in the list of devices. On your iPhone, press the Volume Up button immediately followed by the Volume Down button. Next, press and hold the Side button (or power button) until your iPhone's screen turns black. Release the Side button and then hold down both the Side button and Volume Down button together for approximately five seconds. Now release the Side button, but continue to press the Volume Down button. Wait for at least five seconds for iTunes to recognize DFU recovery mode has been enabled. You should see a message dialog saying "iTunes has detected an iPhone in recovery mode. You must restore this iPhone before it can be used with iTunes". If you don't see the message, repeat the steps above. Once you've closed the iTunes recovery prompt you can go ahead and restore your iPhone back to factory settings by selecting Restore iPhone on the iPhone Recovery Mode screen. Once restored, your iPhone will automatically exit out of DFU mode and boot up to its activation screen. How to Exit DFU Mode If you enabled DFU mode and want to manually exit out of it, here's how it's done. Press the Volume Up button on your iPhone and quickly release it. Press the Volume Down button and release it. Press and hold the Side button until the Apple logo appears on your iPhone's screen. Your iPhone should now have exited DFU recovery mode. Do you own an iPhone 11, iPhone 11 Pro, or iPhone 11 Pro Max? You should know the process to force restart or hard reboot your iPhone 11 or iPhone 11 Pro since it might come in handy if the phone ever freezes or hangs, starts behaving strangely, or stops responding. With newer iPhones no longer coming with a Home button, Apple had to move almost all core functionality to the remaining three buttons. Three buttons are now responsible for the primary functions (volume up, volume down, sleep/wake) as well as turning the phone off, restarting the phone, entering recovery mode, and enabling Emergency SOS. Please note that force restart, hard reset, force reboot, all mean the same thing and you will see these phrases used interchangeably. Since the iPhone 11 and iPhone 11 Pro do not feature a Home button, the process to force reboot it is different from older iPhones that have a home button like the iPhone 7, iPhone 8. Check out the steps below to know how you can force reboot or force restart your iPhone 11 or iPhone 11 Pro. See also: How to Hard Reset iPhone 11, iPhone 11 Pro, or iPhone 11 Pro Max Step 1: Press Volume Up Quickly press and let go the Volume Up key. Step 2: Press Volume Down Quickly press and let go the Volume Down key. You do not need to press and hold down the button. Step 3: Press and Hold Side Button Press and hold the Side button. You will see the Slide to Power off button, but continue holding the Side button until the Apple logo appears. Note that your iPhone 11 or iPhone 11 Pro display must be off for this to work. You cannot be viewing your home screen when starting the Volume up, Volume down, Side button hold sequence. While not usually required, a force restart can be a nifty trick to resolve iPhone 11 and iPhone 11 Pro issues such as freezes, crashes, if your iPhone starts behaving strangely, or just stops responding. If your iPhone 11 has become unresponsive, or it's shut it down and it won't turn on again, all is not lost. The force restart tip can be used when the normal modes of operation aren't working. The steps to force restart the iPhone 11, iPhone 11 Pro, and iPhone 11 Pro Max are quite a bit different from other phones and it's unlikely that you are going to remember this method.
